
Geometry Patty Paper Folding Activities

lesson 3.1 and angles - high school math - in this lesson, you learn what it means to create a geometric construction duplicate a segment by using a straightedge and a compass and by using patty paper duplicate an angle by using a straightedge and a compass and by using patty paper in geometry, there are several methods for creating a figure. you can sketch a figure without using geometry tools. **chapter 3 using tools of geometry - math with mr. leon** - 144 chapter 3 using tools of geometry it is only the first step that is difficult. marie de vichy-chamrod *l e s s o n 3.1 duplicating segments and angles the compass, like the straightedge, has been a useful geometry tool for thousands of years. the ancient egyptians used the compass to mark off distances. translation and reflection - vdoe* - paper. compare the original figure to the reflected figure, including coordinate pairs. _____ 3. on your patty paper, trace the x-axis, the y-axis, and the trapezoid. reflect the trapezoid across the x-axis by folding the patty paper along the x-axis. transfer the trapezoid to the graph paper. **symmetry session seven session seven symmetry patty paper ...** - patty paper activities materials. scissors and squares of paper (patty paper or tissue paper) activity 1. one axis of symmetry. fold square in half to form a mid parallel (figure 1a). with the square folded, use the scissors to cut triangles or other shapes along the fold and along the borders (figure 1b) . predict what the paper **congruent figures; geometry; 4.11a; 4** - of patty paper, and have them trace on the patty paper the original rectangle located at the top. direct them to use this tracing to identify the other rectangles that are exactly the same (congruent), turning or flipping the patty paper as needed. have students circle the rectangles that are congruent to the one at the top. **reflections with patty paper - department of mathematics** - reflections with patty paper *l fig. 1 b a d c l fig. 2 d' a' c' b' b a d c* instructions: 1. draw a diagonal across a piece of patty paper and label it *l*. 2. on one side of the diagonal, draw a quadrilateral (not a square or rectangle) and label it **hands-on strategies for transformational geometry** - the top picture so that the point on the line on the bottom paper and the vertex of the polygon on the top paper coincide, keeping the lines on top of each other. f. trace both polygon figures on to the same sheet of patty paper. g. using a third sheet of patty paper, mark the length of the segment from the **an introduction to transformations** - an introduction to transformations ready (summary) in this lesson, participants are introduced to the concept of transformations through two hands-on activities: a patty paper translation and a rubber band dilation. they learn that a transformation is a mapping of the plane onto itself, and some **different methods of construction objectives core learning ...** - 6. no, i copied and labeled points a and b on the patty paper. keeping the patty paper on point a, i rotated the patty paper to try to line up point b on the patty paper with point c. it was impossible to do since ab geometry - ohio department of education - tracing paper (patty paper) transparencies . graph paper . ruler . protractor . computer dynamic geometry software (geometer's sketchpad®, cabri®, or geogebra®). common misconceptions the terms "mapping" and "under" are used in special ways when studying transformations. a translation is a type of **rotations with patty paper - uh** - 6. place a second piece of patty paper on top of the first so that the sides match. 7. trace *l 1, l 2*, the original quadrilateral, and the segment drawn in #5 onto the top sheet of patty paper. 8. with the end of a sharp pencil on point o, rotate the top sheet until the quadrilateral coincides with its final image. 9. **chapter parallel and perpendicular lines** - piece of patty paper (or any thin white paper or tracing paper). think about how you could make a crease in the paper that would be a line perpendicular to your original line through your point. 20. using what you discovered in number 19, use patty paper to construct a line perpendicular to a given line through a point on the given line. 21. **construction and transformation in geometry** - • discover the deep connections between geometry and algebra, statistics, and numbers and operations. • use constructions with compass and patty paper to prove theorems and explore patterns. • explore a variety of classroom activities to engage all students. for: math teachers, special educators, math department heads,
